

Series VU Linear motion exciters

02/05/2011

Engineered using the same traditions since we were established in 1959, Italtibras Series VU linear motion exciters are designed for the most rugged and severe industrial applications such as large vibrating screens and feeders. Designed for long-life using oversized bearings and the highest of quality construction materials, the Series VU mechanical vibrators will improve the performance and reliability of your machine or process.

Centrifugal force up to 453kN..

Static moment from 4130 to 73440 kgmm.

High-strength ductile iron enclosures for heavy-duty applications

Suitable for a wide ambient range, from -40°C to +70°C.

Several mounting foot pattern to choose from.
